NPLify · Top-Down Map

P0 Technical Baseline · New XP Technologies · 19 October 2026 · compiled from the ERD & Data Model, Lifecycle & Approvals, Ledger Posting Design, Scenario Catalogue, Operating Procedures and Architecture note

0 · business | 1 · domains | 2 · lifecycle & ledger | 3 · scenarios | 4 · the pack | Workflow Tree ↗

LEVEL 0 The business and the system

NPL coordinates collections, conversions and settlements across a network of remittance partners on behalf of its clients, on fiat and USDT rails. NPLify is the internal, configuration-driven platform that runs every project of that business as configuration rather than code. Read this level left to right: who pays, who runs it, who converts and pays out.

CLIENTS AND PROJECTS

- **Betfair** — BF, BF Sub, BF Withdrawal (B.1–B.3)
- **Evo** — invoice payments into EUR; dormant currency products kept in scope (B.4)
- **NPL-GR** — Game Reseller, NPL's own business unit as the client, own desk (B.5)
- **YN Remit, 66 Group, GDC, Peru** — invoice-payment projects (B.6–B.9)
- **JTN, Jonas** — cash projects (B.10–B.11)
- **AK Personal** — balance held at the partner (B.12)
- **Kingdom, Working Lab** — the invoice-payment pattern (B.13)

6 client groups · 13 SOPs · 27 scenarios. Each project is one arrangement with a client; senders, receiver groups and receiving entities belong to the project and are partner-independent.

NPL RUNS THE DEAL

Quote → Collect → Convert → Settle

Every deal is a group of one or more legs; pricing is stamped once; NPL's margin is captured at conversion; release discharges the promise. Every controlled action is maker-checker.

Operations
Quotes, screens wallets, verifies collections, instructs conversions, prepares settlements, requests reroutes. Never sees the economics.

Finance
Approves what Operations initiates, confirms the day's rates, resolves exceptions, reconciles daily and at month end, proposes configuration.

Management
Approves escalations and the heavier actions: loss splits, offsets, balance conversions, dues recovery, covered fees, own-wallet transfers, post-money voids, configuration, users.

The system: one Next.js / TypeScript service (screens, API, background jobs), one PostgreSQL database whose ledger and audit tables accept inserts only, one S3 bucket for evidence, in NPL's own AWS account in Hong

Kong (two application tasks in two zones and a standby database in a second zone, for recovery within one hour; a live standby database, backups, log and bucket in a second region, so that the same hour holds for a whole-region failure). Four outside services, none trusted with the books: Kraken and CoinMarketCap for market rates, Tronscan and Etherscan for transaction hashes, one Google Sheet per client as its status journal.

PARTNERS AND RAILS

- **Ali** — SWIFT via PT Sukses / PT Global / PT Silver Lining; cash by token in named cities; one-time local accounts; 14:30 Hong Kong bank cutoff; cost inside its rate
- **Jeton** — USDT collections and bank-in for withdrawals; fee on market 1–1.25 %; rebate 0.4 % monthly; no cutoff
- **Aquanow** — USDT → EUR with internal transfer to BF; fee 0.8 %; rebate 0.3 %; no cutoff
- **NPL's own desk and wallets** — LT Sub at Aquanow; reroute contingency; bridge on a network a partner lacks

Rails: USDT on TRC-20 / ERC-20 with wallet screening · SWIFT / SEPA · cash by token · local deposit and local payout · internal transfer inside the partner's platform. Ten shared flows F1–F10 cover them all.

LEVEL 1 The four domains: 78 tables, 12 views

One schema, seven diagrams, four domains (ERD & Data Model). Each entity is coloured by what kind of record it is, and the small number is how many of the 27 scenarios name it directly in the Scenario Catalogue. Click an entity to read what it is for and which scenarios use it; pick a scenario in Level 3 and the entities it names light up here.

`Configuration (master data)`

Set up before deals; versioned, never edited; Finance proposes, Management approves.

`Rate reference`

Captured or entered daily; never overwritten; every conversion names its exact version.

`Transactional event`

Written as a deal moves; each state change may post a ledger transaction.

`Ledger (append-only)`

Inserts only, enforced by the database; balances derived from posting history.

`Control`

Modelled once, applied to all master data and every controlled action.

`VIEW` Derived, never stored

▾ Domain 1 · Configuration

33 tables

Clients, projects, parties, the partner configuration block, fees and tiers, rates sources, templates, settings. Finance proposes, Management approves; versioned by effective date.

Diagram 1a — Configuration — project, parties, receiver groups and wallet screening

LEVEL 2 The deal lifecycle and the ledger

What state a leg is in, what moves it, and what each move posts. A leg walks the top row; collect-first and return legs are born at Collected; an estimate-first leg enters Collecting. Orange states are exceptions, grey ones are ends.

Deal leg states (Lifecycle Figure 1)

Inquiry · Quoted · Sent · Accepted · Collecting · Collected · Rate locked, awaiting due date
Converting · Converted · Settled · Expired / in grace · Requoted · Voided
Voided after collection → Refunded / Credited / Held · Rerouted
Loss event (NPL stands in; deal continues)

From	To	Event	Guard	Who
`Inquiry`	`Quoted`	Price computed: partner × pair chosen, fee structure and tier applied, rate snapshot taken, day's rate comparison created if missing; customer-facing fee and rate derived	Partner rate version usable (not breached); margin ≥ floor, else Finance approval; an approved destination exists for the entitled group with that partner;	Ops; Finance if below margin

			the method is one the partner offers	
Quoted	Sent	Quote package issued and marked sent (sender-facing template only)	Within quote_freshness_min of the snapshot; otherwise re-price	Ops
Sent	Accepted	Sender accepts	Within the validity in force (effective_valid_until)	Ops records
Sent / Accepted	Sent / Accepted (validity extended)	QUOTE_VALIDITY_EXTENSION: the package re-issued at the same price with a later validity	Before the validity in force ends; any number of times; Finance approves, Management added when the new validity passes the partner's cutoff or the rate version's expiry	Ops requests; Finance
Sent / Accepted	Expired / in grace	Validity lapses	Grace applies for grace_min only if market drift ≤ grace_drift_pct	System
Expired / in grace	Requoted	Late decision: re-quote, a new deal group; at the sender's request the new leg may be priced on the expired leg's rate by an approved override (honour_expired_rate), the difference posting to VAR_RATE_HONOUR	New deal group reference; the original stamp is kept; Finance approves the override	Ops; Finance
Expired / in grace	Collected	Late decision: honour the old quote within grace	Project late_collection_policy allows it; recorded Finance approval	Finance
Accepted	Collecting	Instructions issued: an active endpoint of the leg's partner entity matching the collection method, a bridge wallet where the partner lacks the network, or cash instructions with a token	Endpoint active (a bank endpoint only with rail) and of the right kind; a crypto sender's wallet screened unless the project skips up-front screening	Ops
Collecting	Collected	All parts verified (hash / slip / receipt; a cash part after the	Collected amount matches; each part	Ops verifies

		partner's count)	landed in an active endpoint of the leg's partner entity matching the method; a single-use endpoint serves this deal only; overpayment → sender credit; underpayment → wait or void	
`Collected`	`Rate locked, awaiting due date`	On a pair that relies on the banking channel the partner confirms the rate after its cutoff	needs_bank_lock; conversion_due_date = the next business day (weekends and HOLIDAY rows skipped)	System
`Collected / Rate locked`	`Converting`	Conversion instructed to the partner, optionally keeping the deal's margin unconverted (residual_in)	Rate version still usable; not before conversion_due_date; a next-day rate that breaches the minimum margin defers the conversion with a reason	Ops; Finance approves
`Converting`	`Converted`	Partner books; actual_out recorded; margin recognised; the pair's rounding applied; markup-share and rebate accruals posted	Variance within tolerance, else an exception opens (the deal does not wait); the difference posts to the account of its cause	System; Finance on exception
`Converted`	`Settled`	Client net released by the partner, the promise discharged on release, every line confirmed (full or short) or returned	Settlement lifecycle (Figure 2)	—
`Collected`	`Loss event`	Money lost after verification: a frozen single-use account, cash found short, a wrong-chain transfer	Management approves the split; the whole loss is booked to NPL and the client made whole; the part stays verified and the deal continues	Ops records; Finance; Management
`Inquiry … Collecting`	`Voided`	Void before money moved	Reason recorded; no postings	Ops; Finance
`Collected / Converted`	`Voided after collection`	Void after money moved	Disposition: refund (network-fee policy), sender credit, or hold	Ops; Management

Converting / Collected	Rerouted → Collected at the alternate partner	Partner unavailable, limit reached, holiday, compliance hold	Approved REROUTE; alternate partner in the applicable set	Ops; Finance

Approval (Figure 5)

Loss event (Figure 6)

Earnings offset (Figure 7)

How money is accounted: the chart of accounts (Ledger Posting Design §3)

Account codes read OWNER.HOLDER.CURRENCY.PURPOSE: CL for client funds, CO for company; the holder is a partner configuration, OWN for NPL's wallets, a receiver, sender or party, PROJECT, or NONE for income, expense and clearing. Accounts are created on first posting; balances are derived from posting history.

Account	Kind	Owner	What the balance means
CL.<PARTNER>.<CCY>.COLLECTED	asset	client	Client money received at this partner and not yet converted.
CL.OWN.<CCY>.HELD	asset	client	Client money in one of NPL's own wallets: an approved reroute or a bridge collection awaiting its hop.
CL.<PARTNER>.<CCY>.DUE	asset	client	Converted client money resting at this partner, waiting to be settled; one per project × partner × currency (PROJECT_BALANCE).
CL.<RECEIVER>.<CCY>.SHORTFALL	asset	client	Delivered short to a receiver and still to be made good.
CL.PROJECT.<CCY>.PAYABLE	liability	client	What NPL must deliver to the project's receivers per currency; the split by group is

			GROUP_ENTITLEMENT.
`CL.<SENDER>.<CCY>.CREDIT`	liability	client	Owed back to a sender: an overpayment waiting to be refunded or applied.
`CL.PROJECT.<CCY>.MAKEGOOD`	asset	client	Client money NPL has undertaken to replace after a loss but not yet placed at a partner.
`CO.<PARTNER>.<CCY>.POOL`	asset	company	NPL's own money resting at this partner: margin captured at conversion plus anything transferred there.
`CO.OWN.<CCY>.WALLET`	asset	company	NPL's own money in its own wallets: recovered dues, rebates and shares received, network fees paid.
`CO.<PARTNER>.<CCY>.REBATE_RECEIVABLE`	asset	company	Rebate a partner owes NPL on NPLify deals, reconciled monthly.
`CO.<PARTY>.<CCY>.SHARE_RECEIVABLE`	asset	company	NPL's remainder of the markup owed by a party that holds the converted funds.
`CO.<PARTY>.<CCY>.SHARE_PAYABLE`	liability	company	Markup share owed by NPL to a party.
`CO.<PARTNER|SENDER>.<CCY>.LOSS_RECEIVABLE`	asset	company	The partner's or sender's agreed share of a loss, owed to NPL.
`CO.NONE.<CCY>.LOSS_PAYABLE`	liability	company	The unfunded part of a make-good; mirrors MAKEGOOD.
`CO.<VENDOR>.<CCY>.VENDOR_PAYABLE`	liability	company	NPL-GR: owed to a vendor on a vendor invoice; cleared as payout lines discharge it.
`CO.<CUSTOMER>.<CCY>.RESALE_RECEIVABLE`	asset	company	NPL-GR: owed by a reseller customer on a resale invoice.
`CO.PROJECT.<CCY>.REMIT_CLAIM`	asset	company	NPL-GR: what the remittance side holds for NPL-GR, mirroring the project's PAYABLE.
`CO.NONE.<CCY>.EARN_GROSS`	income	company	Margin recognised at conversion before partner cost; markup shares debited here.
`CO.NONE.<CCY>.EARN_REBATE`	income	company	Rebate income, never in a markup-share base.
`CO.NONE.<CCY>.RESELL_REVENUE`	income	company	NPL-GR: the resale invoice at retail, recognised when issued.
`CO.NONE.<CCY>.RESELL_COST`	expense	company	NPL-GR: the vendor invoice at the preferential price, recognised when received.

CO.NONE.<CCY>.EXP_PARTNER	expense	company	Partner cost where stated separately (fee_on_market); zero for fee_in_rate partners and the own desk.
CO.NONE.<CCY>.EXP_BANKFEE	expense	company	Bank and payout fees NPL absorbs: gross-ups, top-ups, bounce fees, covered fees.
CO.NONE.<CCY>.EXP_NETWORK	expense	company	Crypto network fees NPL absorbs: a refund, a bridge hop, a forwarded reroute.
CO.NONE.<CCY>.EXP_ROUNDING	expense	company	The amount added when a payout is rounded up to the pair's unit.
CO.NONE.<CCY>.EXP_LOSS	expense	company	Loss events: the whole loss first; each recovered share credited back.
CO.NONE.<CCY>.VAR_CONVERSION	expense	company	Partner converted differently from the engine's expectation; basis variance on a reroute.
CO.NONE.<CCY>.VAR_CUTOFF	expense	company	Rate stamped at lock vs the rate used after the partner's cutoff.
CO.NONE.<CCY>.VAR_RATE_HONOUR	expense	company	An expired quote's rate honoured by override vs the partner's rate on the day.
CO.NONE.<CCY>.VAR_FX_TIMING	expense	company	Forex result of discharging an obligation in one currency with money held in another (instalments).
CO.NONE.<CCY>.FX_RESULT	expense	company	NPL's own currency exchanges: earnings offsets, pools squared, company balances settled in another currency.

What each event posts (Ledger §22)

Source event	Posts to
Invoice	RESELL_COST and VENDOR_PAYABLE (vendor invoice); RESALE_RECEIVABLE and RESELL_REVENUE (resale invoice)
Collection	COLLECTED or HELD, PAYABLE, CREDIT; in NPL-GR also REMIT_CLAIM and RESALE_RECEIVABLE
Conversion (deal leg)	COLLECTED / PAYABLE in-currency; DUE, PAYABLE, POOL, EARN_GROSS, EXP_PARTNER, EXP_ROUNDING, SHARE_RECEIVABLE, a VAR_ account out-currency
BalanceConversion	DUE and PAYABLE in both currencies; POOL and EARN_GROSS if a markup is decided

Settlement	PAYABLE and DUE on release; EXP_BANKFEE and POOL when a fee is absorbed up front; a hop posts nothing on release
SettlementReturn	DUE and PAYABLE re-raised; EXP_BANKFEE and POOL for the bounce fee
Confirmation	Nothing on a full delivery; SHORTFALL and PAYABLE on a short one; a hop credited: COLLECTED or DUE from HELD or DUE, with EXP_NETWORK and WALLET
BankFeeEvent	EXP_BANKFEE, POOL, DUE, SHORTFALL
Reroute	HELD, COLLECTED at the alternate partner; WALLET and POOL for recovered dues; VAR_CONVERSION for basis variance
EarningsOffset	DUE and POOL at the partner holding NPL's margin; COLLECTED and POOL at the partner holding unconverted client money; PAYABLE in both currencies; FX_RESULT
MarkupShare	EARN_GROSS, SHARE_PAYABLE or SHARE_RECEIVABLE; WALLET or POOL on settlement
Rebate	REBATE_RECEIVABLE, EARN_REBATE; WALLET on receipt
LossEvent	EXP_LOSS, POOL or WALLET (or LOSS_PAYABLE), COLLECTED / DUE (or MAKEGOOD), PAYABLE re-raised on a settlement-side loss
LossRecovery	LOSS_RECEIVABLE against EXP_LOSS when agreed; POOL or WALLET against LOSS_RECEIVABLE when received; the client's share a partial reversal of the make-good
Adjustment	Any, always as a reversal plus a correct re-posting, a Management-approved disposition, or a company exchange through FX_RESULT

The eighteen posting patterns, with 67 worked transactions (numbered T1 to T61; the a, b, c variants make 67, one fixture each) (Ledger §6–§19d; Reading Companion)

Pattern A · Direct collection, conversion and accumulation
Pattern B · Part collection
Pattern C · Settlement, confirmation, bank fees, shortfalls, rounding
Pattern D · Contingency routes and the bridge wallet
Pattern E · Cancellations, reversals and voids
Pattern F · Rejected payout and return leg
Pattern G · Inter-group offsets
Pattern H · Balance conversion
Pattern I · Overpayment and sender credit
Pattern J · Markup shares and partner rebates
Pattern K · Variances, by kind
Pattern L · Loss events: booked to NPL first, recovered share by share
Pattern M · The reseller project (NPL-GR): two invoices, one remittance deal
Pattern N · Earnings kept in the unconverted balance and offset between partners

LEVEL 3

The 27 scenarios on the model

Every scenario NPL runs today (Scenario Catalogue Part 1), with its story, fee and flow, the shared flows it uses, the project SOP it is run under, and the entities of the model that carry it. Click a scenario to light up its entities in Level 1; click an entity to read about it.

All 27 | Betfair (BF) (6) | Evo (9) | NPL-GR (Game Reseller) (3) | YN Remit, 66 Group, GDC, Peru (invoice-payment projects) (4) | JTN, Jonas (cash projects) (2) | AK Personal (3)

1.1 BF via Jeton: market minus fee, rebate back

Sender (Seven, Arrow Wood, Trade Lab, Orbit, Blue Sapphire) pays 1 % off market; Jeton keeps the full 1 % and pays NPL 0.4 % back monthly; Novi pays 0.9 % with 0.3 % back

Fee and flow: Fixed fee on market basis; F2 in, F5 out to BF's Sporting Exchange account F2 F5 B.1

FEE_OVERRIDE FEE_STRUCTURE PARTNER_REBATE_ACCRUAL PARTNER_REBATE_RULE

1.2 BF via Ali: agent rate, customer-facing 1 %

Ali's 1 % sits inside its rate, NPL adds 0.4 %, the customer's calculation shows 'fee 1 %' on a recomputed source rate; Ali sometimes quotes 1.1738 the other way round

Fee and flow: Fixed fee on agent-rate basis; F2 in, F4/F5 by SWIFT under PT Sukses, F9 cutoff on the EUR settlement F2 F4 F5 F9 B.1

DEAL_GROUP FEE_STRUCTURE PARTNER_RATE_VERSION QUOTE_PACKAGE

1.3 BF via Aquanow: flat 0.8 %, rebate 0.3 %

Aquanow charges 0.8 % and pays NPL 0.3 % back monthly; EUR reaches BF by internal transfer, instantly

Fee and flow: Fixed fee; F2 in, F10 out F2 F10 B.1

PARTNER_PAIR PARTNER_REBATE_RULE RECEIVING_ENTITY_ACCOUNT

1.4 BF Sub via Aquanow or Ali: markup shared with Raeen

Downlines fund a sub-account Raeen provides at 4 %; the 4 % less the partner fee (3.2 % via Aquanow, 3 % via Ali) is split equally with Raeen; the EUR lands in Raeen's own Aquanow account, Raeen keeps its share and pays NPL monthly; Aquanow's 0.3 % rebate is NPL's alone

Fee and flow: Fixed 4 % with a share rule; F2 in, F10 out (Aquanow) or F5 under Raeen's name (Ali) F2 F5 F10 B.2

MARKUP_SHARE_ACCRUAL MARKUP_SHARE_RULE SETTLEMENT_SENDING_ENTITY

1.5 Raeen direct collections via Aquanow (not sub-accounts)

Raeen collects from its downlines into its own BF account at 1 %; Aquanow's cost is 0.8 %; the 0.2 % left is split 75/25 — 0.15 % to Raeen, 0.05 % to NPL — plus Aquanow's 0.3 % rebate to NPL

Fee and flow: Fixed 1 % with a 75/25 share rule; F2 in, F10 out F2 F10 B.1

MARKUP_SHARE_RULE

1.6 BF Withdrawal via Jeton

BF wires the customer's balance to Jeton's SWIFT account; Jeton converts at 1 % over market and pays the customer's TRC-20 or ERC-20 wallet; 0.4 % back monthly; Jeton is the only partner able to receive it

Fee and flow: Fixed 1 %; F4 in (bank at Jeton), F3 then wallet payout F3 F4 B.3

DESTINATION_APPROVAL RECEIVING_ENTITY_ACCOUNT WALLET_SCREENING

2.1 Standard USDT collection

Sender pays 1.4 % off the rate, Evo pays 0.6 % from its balance at conversion; sender sees only the sender rate

Fee and flow: 2 % split 1.4 / 0.6; F2 in (screening not done for every Evo sender), F5 out by SWIFT under Bplay F2 F5 B.4

COLLECTION CONVERSION FEE_STRUCTURE

2.2 Selected senders (GTSI, HG, Komodo)

Sender pays 1.0 % while Evo still pays 0.6 %

Fee and flow: 1.6 % with the receiver part fixed B.4

DEAL FEE_OVERRIDE

2.3 Two receiver groups

Bplay group: Babylon, paid on an invoice reference; Bplay and Lex, self-transfers with an internal invoice or statement reference. TBet group: TBet, self-transfers with an internal invoice or statement reference. Ali pays Babylon and TBet; Jeton pays Bplay, Lex and TBet

Fee and flow: Configuration B.4

DESTINATION_APPROVAL RECEIVER_GROUP SENDER_RECEIVER_ALLOW SETTLEMENT_LINE

2.4 Collect-first and quote-first senders

Some pay what they can, others the exact invoice

Fee and flow: Entry mode per sender B.4

DEAL_GROUP

2.5 Via Jeton instead of Ali

Jeton charges 1.25 % overall and pays 0.4 % back monthly; Jeton collects USDT only

Fee and flow: F2 in, F5 out F2 F5 B.4

PARTNER_PAIR PARTNER_REBATE_RULE

2.6 Other currencies via Ali, and the 14:30 cutoff

Rate taken from Ali in the morning and compared; a deal locked before 14:30 GMT+8 converts the same day, after it the collection goes ahead on the morning's figures and converts the next business day; NPL absorbs the difference; an unacceptable next-day rate is renegotiated or deferred a day

Fee and flow: F4 in, F9 F4 F9 B.4

DEAL HOLIDAY PARTNER PARTNER_CUTOFF_OVERRIDE PROJECT_BALANCE

2.7 Returned payout

A bank rejects the transfer

Fee and flow: F6 F6 B.4

SETTLEMENT_RETURN

2.8 Same-currency pass-through (USD, EUR, GBP) — dormant

A bank transfer in and the same currency out; 1.4 % from the sender and 1.4 % from Evolution

Fee and flow: 2.8 %; F4 in, F5 out, F9 F4 F5 F9 B.4

CONVERSION CURRENCY_PAIR FEE_STRUCTURE

2.9 CNY, PHP, THB, SGD, HKD; AED and USD cash in Dubai (older currency pairs) — dormant

Older currency pairs of the same client at 3.2-6.75 %; AED cash rounds to the nearest 100, USD cash in Dubai to the nearest 10

Fee and flow: F4 or F1 in F1 F4 B.4

CURRENCY_PAIR

3.1 USDT customers (Bala, Fair, 66 Group GR, TripleSeven, Alpha Plus)

Customer owes EUR, pays USDT straight into NPL's own wallet (LT Sub at Aquanow, occasionally Ali's wallet as NPL's own balance); 2 % markup over market; the USDT collected is rounded up

Fee and flow: Fixed 2 % (0.75-1.5 % for some); F2 in to NPL's wallet F2 B.5

CLIENT COLLECTION_RECEIVING_ENDPOINT CURRENCY_PAIR OWN_WALLET PARTNER_CONFIG PROJECT

3.2 27 Group: THB cash

Customer pays THB cash by token through Ali at market + 2 %; Ali converts THB to USDT, which moves to NPL's wallet or stays at Ali as NPL's balance; Ali's rate must stay within 1.5 % of market so NPL keeps 0.5 %

Fee and flow: Fixed 2 %; F1 in; INR cash possible later by the same process F1 B.5

COLLECTION DEAL PARTNER_RATE_VERSION

3.3 Vendor invoices paid in parts

Customers pay against a EUR invoice or an advance; vendors (SACCO SIA, Mitratech, EZ-EVO, BraversPlay) are paid in USDT on different days at that day's rate; the forex difference is accepted within the 2 %

Fee and flow: USDT settlements to vendor wallets, F3 before each F3 B.5

DEAL_GROUP INVOICE INVOICE_BALANCE PROJECT SETTLEMENT_LINE

4.1 YN Remit

Third-party invoices with a clear sending and receiving entity and KYC onboarded on Ali's PT channels; quote first at partner rate + 0.5 %; USDT to USD, EUR or GBP; occasionally NPL's own entity is the declared sender

Fee and flow: Variable 0.5-2.19 %; F2 in, F4/F5 out, F6 if returned, F9 F2 F4 F5 F6 F9 B.6

DEAL_GROUP DESTINATION_APPROVAL FEE_STRUCTURE SETTLEMENT_SENDING_ENTITY

4.2 66 Group, multi-currency and INR cash

Like YN Remit; INR almost always collected as cash at 7 % total (average 6 %, minimum margin 0.5 %), rounded to 1,000; a local INR account is arranged on demand for one transaction

Fee and flow: Variable, set per deal; F1 in (cash) or F7 (one-time local account), F5 out under NPL's name via PT Global F1 F5 F7 B.7

COLLECTION_RECEIVING_ENDPOINT DEAL FEE_STRUCTURE LOSS_EVENT

4.3 GDC, fee by monthly volume

USDT to USD at 1: 1 plus 2.5 %, 2.25 % once the calendar-month volume passes USD 500,000, the crossing deal split; several receiving entities (Adu Ads, Ad Fusion, TDC, Pixel Labs); New Pinnacle Ltd contracts; minimum margin 1.8 %

Fee and flow: Tiered; F2 in, F5 out via PT Global, F9 F2 F5 F9 B.8

DEAL_FEE_TIER FEE_TIER PROJECT_MONTH_VOLUME RECEIVER RECEIVING_ENTITY_ACCOUNT SETTLEMENT_SENDING_ENTITY

4.4 Peru remittance

Bank transfer to Ali's receiving entity PT Silver Lining Production, converted to USDT; Ali 3 % + NPL 1 %

Fee and flow: Fixed 4 %; F4 in, F3 then wallet payout F3 F4 B.9

PARTNER_PAIR

5.1 JTN-JPY cash

JTN sends USDT to Ali; Ali converts to JPY cash handed over by token; the day's rate is compared and quoted with a markup of 0.2-0.5 %, maximum 0.5 %; total fee 1-1.8 %

Fee and flow: Variable with a maximum markup; F2 in, F1 out F1 F2 B.10

DEAL FEE_STRUCTURE SETTLEMENT_LINE

5.2 Ad hoc INR cash (Jonas)

INR cash collected by token in a named city at 7 % total, paid out in USD, SGD or USDT; rates differ between Delhi and Mumbai

Fee and flow: Fixed 7 %; F1 in, wallet or F5 out F1 F5 B.11

COLLECTION DEAL PARTNER_RATE_VERSION

6.1 Held balance

USDT (and INR) collected; balances kept in USD, SGD and USDT up to about USD 400,000 equivalent, revised from time to time

Fee and flow: 0 %; F2 in F2 B.12

CLIENT_POSITION FEE_STRUCTURE PROJECT PROJECT_BALANCE

6.2 Conversions between held currencies

10,000 USDT collected at night converts to SGD the next business morning: USD and SGD are banking-ready balances bound by the cutoff

Fee and flow: F9 F9 B.12

BALANCE_CONVERSION ENTITLEMENT_REATTRIBUTION

6.3 Withdrawals on request

Local bank payment, SWIFT, USDT or cash

Fee and flow: F8 (local), F5 (SWIFT), F3 then wallet, F1 (cash) F1 F3 F5 F8 B.12

RECEIVING_ENTITY_ACCOUNT SETTLEMENT SETTLEMENT_LINE

LEVEL 4 The pack: seventeen documents and the order to read them

Each document answers one question. Read the proposal first, then this map and the Workflow Tree, then the ERD and the Configuration Schema for what is stored and set up, the Calculation Specification and the Ledger Posting Design for the figures and the books, the Lifecycle and the Roles matrix for who does what, the Operating Procedures and the Scenario Catalogue for how each project runs, and the Cutover and Architecture notes for going live.

Document	File	What it contains	The question it answers
Proposal	`NPLify Proposal by NewXP v1.5.pdf`	Scope, phases (P0 Pre-Start; Phase 1 M0-M5; Phase 2 M6-M7; Phase 3 M8-M11), fees, timeline, support.	Start here for what is being built and when.
ERD & Data Model	`Client-ERD-and-Data-Model.pdf`	Seven diagrams, four domains, 78 tables and 12 views; Appendix A FRS	What is stored, and what is derived.

		reconciliation; Appendix B data dictionary.	
Configuration Schema	`Client-Configuration-Schema.pdf`	How configuration is organised and changed; global master data; project settings; parties; the partner configuration block; 12 cross-entity rules; the FRS project worked end to end.	What must be set up before a deal.
Calculation Specification	`Client-Calculation-Specification.pdf`	Rate basis and breach check; fee parts; fixed and variable modes; tiers; amount modes; rounding; shares and rebates; variances; acceptance vectors A (9) and B (17).	How every figure is computed.
Lifecycle & Approvals	`Client-Lifecycle-and-Approvals.pdf`	The deal leg state machine (Figure 1), settlement, rate, reroute, approval, loss and offset machines; 40 controlled actions with initiator, approver, escalation and rejection; state tables; aging.	Who may do what, and what state a record is in.
Roles & Visibility Matrix	`Client-Roles-and-Visibility-Matrix.pdf`	Field groups; view and approval rights per module and field group; ROLE_RIGHT rows; nine enforcement rules.	What each role sees and approves.
Ledger Posting Design	`Client-Ledger-Posting-Design.pdf`	Rules every posting follows; chart of accounts; cost components; Patterns A-R with 67 worked transactions (numbered T1 to T61 with variants); identities and controls; reports; sources.	How money moves in the books.
Ledger Patterns Reading Companion	`Client-Ledger-Patterns-Reading-Companion.pdf`	The same 67 worked transactions with a plain-language explanation beside each, and the identifier register.	Read the ledger without the accounting.

Operating Procedures	`Client-Operating-Procedures.pdf`	Ten common procedures C1-C10; standing procedures A.1-A.9; one SOP per project B.1-B.13; Part C starting a new project.	How each project is run day to day.
Scenario Catalogue	`Client-Scenario-Catalogue.pdf`	27 scenarios across 6 client groups with fee, flow and model entities; shared flows F1-F10; walkthroughs W1-W8.	Every scenario NPL runs today.
Cutover Approach	`Client-Cutover-Approach.pdf`	Parallel run on staging, opening entries and in-flight deals, reconciliation checks, thirteen exit criteria, switch day, rollback, recovery runbook, handover list, roles, decisions for NPL.	How the platform goes live.
Architecture & Stack Note	`Client-Architecture-and-Stack-Note.pdf`	One Next.js / TypeScript service, one PostgreSQL database with an insert-only ledger, one S3 bucket, in NPL's AWS account; background jobs; environments, backups and cost; decisions for NPL.	What runs where.
Workflow Tree	`NPLify-Workflow-Tree.html`	Every workflow as one tree: eight classes, their sub-classes, and each procedure with initiator, approver, escalation, rights code and document references.	Find any workflow and who runs it.
Test Strategy & Coverage	`Client-Test-Strategy-and-Coverage.pdf`	Every test family with its purpose, result class, level and phase; the regression gate every release must pass; the coverage map over the 27 sub-classes.	Which test proves each procedure.
Deal Flow on one page	`Client-Deal-Flow-One-Page.pdf`	Quote, Collect, Convert, Settle on one page, with	How a deal flows, at a glance.

		the roles and the money path.	
Workflow Tree on one page	`Client-Workflow-Tree-One-Page.pdf`	The eight classes and 27 sub-classes on one page.	The tree at a glance.
Top-Down Map	`NPLify-Top-Down-Map.html`	This page: the business, the four domains and their entities, the deal lifecycle and the ledger, the 27 scenarios on the model, and the pack itself.	See how the pieces fit.

Entity purposes are condensed from the ERD & Data Model (11 Oct 2026) domain notes and Appendix B; views from the ERD view definitions; states and transitions from the Lifecycle & Approvals (11 Oct 2026) §2–§3 and §7; accounts and sources from the Ledger Posting Design (11 Oct 2026) §3 and §22; scenarios verbatim from the Scenario Catalogue (16 Oct 2026); SOP assignments from the Operating Procedures (13 Oct 2026) Part B; the system description from the Architecture & Stack Note (11 Oct 2026) §1. Scenario counts per entity count the scenarios whose "in the model" line names the entity. Generated 19 October 2026.
