Roles & Visibility Matrix

New XP Technologies Limited

28 October 2026 · Confidential

How to read this pack

Four map pages are now part of the pack as documents of their own, and are the place to start: the Top-Down Map (from the business, through the data model and the deal states, to the scenarios and the reading order), the Deal Flow on one page (Quote, Collect, Convert, Settle, with the roles and the money path), the Workflow Tree (8 classes, 27 sub-classes, 96 procedures, each naming who initiates, who approves, the codes it is written under and the records it touches) and the Workflow Tree on one page. Read them in that order, then this document. Every worked transaction (T), acceptance vector (L, B), walkthrough (W, X), flow (F) and procedure (C, A, D) has one identifier, listed in the Reading Companion's identifier register; the Test Strategy & Coverage document says which test proves each procedure.

1 · The model in one page

Three roles, three nested rings. **Operations** runs deals: quotes and extends quotes, screens wallets, verifies collections, instructs conversions, prepares settlements, enters partner rates as quoted, requests reroutes, records destination approvals and loss events. **Finance** sees everything Operations sees plus the economics, approves what Operations initiates, resolves exceptions, recommends covered fees, requests balance conversions, dues recovery, earnings offsets and loss splits, proposes configuration and owns reconciliation. **Management** sees everything and approves the heavier actions, every configuration change and every user change. Visibility is *cumulative* — a wider role never loses a narrower role's view — and approval is *maker-checker*: the person who initiates an action is never the person who approves it, enforced by the server from the ROLE_RIGHT rows, not by convention.

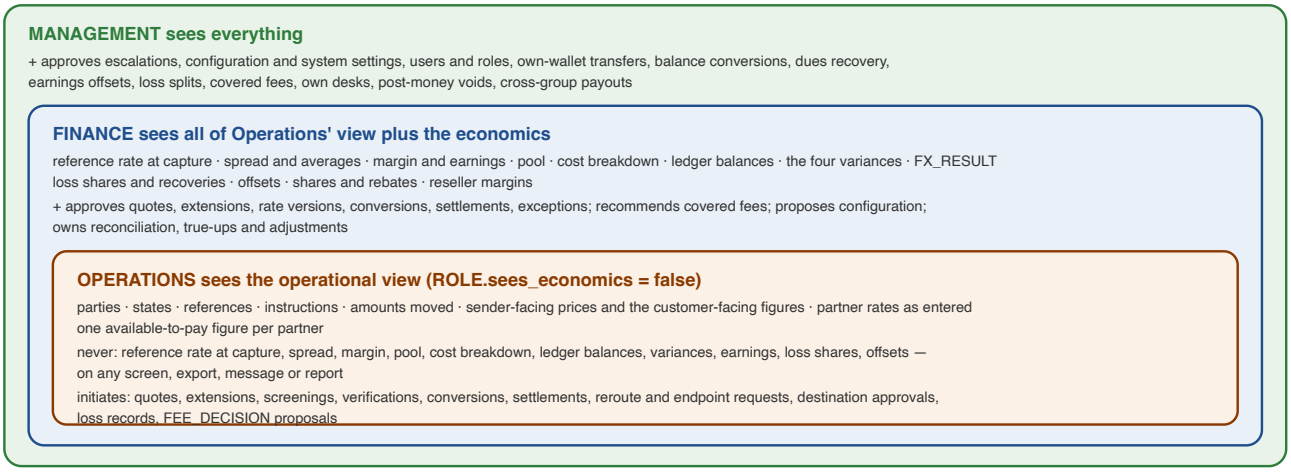

Figure 1 — Cumulative visibility. Each ring sees everything inside it. Rights to approve grow outward; rights to see never shrink.

Derived economics — what Operations never sees. The reference rate at capture · the spread and rolling averages · NPL's margin and earnings, retained or offset · the pool resting at a partner · the cost breakdown (partner fee, bank and network fees, rounding, loss) · the four variances by cause and FX_RESULT · ledger balances · markup-share and rebate accruals · a loss event's split, funding and recoveries · the reseller and remittance margins and NPL's profit · any figure converted into the reporting currency. The rule applies on *any screen, export, message or report*; it is enforced where values leave the system, not in the user interface. Operations does see the customer-facing fee and rate a quote prints: they are what the sender sees.

2 · Field groups

Every field of every table belongs to exactly one of eight groups, and the group decides who sees it. The groups are the unit of enforcement: the build filters by group, and the tests check by group.

Group	Who sees it	What it holds
Operational	Operations · Finance · Management	Identities, states, references, timestamps, instructions, parties, accounts, endpoints, screenings, quote packages, invoices and the amounts that physically move (collected, released, confirmed, returned, discharged). Everything Operations needs to run a deal.
Sender-facing prices	Operations · Finance · Management	What the sender is quoted and pays: the sender rate, the fee percentages applied to the sender and receiver, the tier that applied, the customer-facing fee and rate the quote prints, the gross and net amounts promised. Visible to Operations because they are what the customer sees.
Partner rates as entered	Operations · Finance · Management	The rate a partner quoted, as Operations typed it in (with its direction and, for cash, its city); the partner's pricing style; what the partner actually delivered; the rate a payout line was discharged at. Entered by Operations, so visible to Operations.
Reference rate and comparison	Finance · Management	The market snapshot at capture, the day's comparison, spreads, rolling averages, breach thresholds. Operations sees only whether a partner × pair is usable or frozen.
Margin, pool, cost breakdown	Finance · Management	NPL's margin and earnings, the expected conversion the engine computed, the four variances by cause, rounding residuals, partner fees, minimum margins, earnings resting at partners and offset between them, rebates, markup shares, bank and network fees as costs, loss shares and recoveries, FX_RESULT, the reseller and remittance margins and NPL's profit, and every figure converted into the reporting currency.
Ledger and balances	Finance · Management	Accounts, transactions, postings, and every balance derived from them: client balance per partner, group entitlement, offsets, custody, the client-level roll-up. Operations sees one figure only: the amount available to pay out at a partner.
Configuration and master data	view: all · propose: Finance · approve: Management	Clients, project settings, pairs and rounding, thresholds, partner configuration, cutoffs and holidays, fee structures and tiers, destination approvals, templates, system settings. Visible to everyone who operates them; changed only through Finance's proposal and Management's approval.
Approvals, audit, users, roles	own requests: Operations · all: Finance · Management	Approval records, the audit log, record locks, users, roles and the rights per controlled action.
Not readable by any role	—	The one-time code of Email OTP, stored as a hash for validation only: in no screen, export, API response or notification for any role (rule 13).

3 · The matrix: view and approval rights by module and field group

view = may read · enter = may create or edit the operational record · propose = may submit a change for approval · approve = may approve within the role's scope · confirm = Finance confirms a partner rate version · — = no access. Approvals of controlled actions are in Section 4; configuration is always proposed by Finance and approved by Management.

Module	Field group in this module	Group	Operations	Finance	Management	Tables and fields covered
Clients and system	Clients, their projects, system settings and the reporting currency	Configuration and master data	view	view · propose	view · approve	CLIENT, PROJECT.client_id, SYSTEM_SETTING, platform-scope CURRENCY_PAIRs
	Exposure ceilings (project and client)	Margin, pool, cost breakdown	—	view	view	PROJECT.exposure_ceiling, CLIENT.exposure_ceiling — compared through REPORTING_VALUE; Operations sees that a release is blocked, not the figure

Module	Field group in this module	Group	Operations	Finance	Management	Tables and fields covered
Configuration	Project, pairs and rounding, rate-source chains, thresholds, own wallets, templates	Configuration and master data	view	view · propose	view · approve	PROJECT, CURRENCY_PAIR (amount_rounding, cash_rounding), PAIR_RATE_SOURCE, THRESHOLD, OWN_WALLET (role), MESSAGE_TEMPLATE
	Email OTP settings: the project's switch and three windows; each sender's registered approver address and chat group	Configuration and master data	view	view · propose	view · approve	PROJECT.email_otp_enabled; SENDER.email_otp_required, email_otp_approver_email, email_otp_chat_platform / group_name / group_id (one set per sender); THRESHOLD kinds email_otp_* — protected master data: Operations enters, Finance approves, verified before active; an exemption Management-approved (rule 13)
	Parties: senders, groups, receivers, entities, accounts, allow-lists	Configuration and master data	view	view · propose	view · approve	SENDER, SENDER_RECEIVER_ALLOW, COLLECTION_SENDING_ENTITY, RECEIVER_GROUP, RECEIVER, RECEIVING_ENTITY, RECEIVING_ENTITY_ACCOUNT (single_use)
	Bank account details, in full (holder, bank, IBAN or account number, BIC, sort code ...) and the templates per rail	Configuration and master data	view	view · propose	view · approve	BANK_ACCOUNT_DETAILS, BANK_DETAILS_TEMPLATE — Operations enters, Finance or Management approves; all three roles read in full, no masking; every full read is logged (rule 10)
	Partner block: methods, cutoff and holidays, pairs, vehicles, endpoints, rails, narratives, destination approvals	Configuration and master data	view	view · propose	view · approve	PARTNER (supported_methods, bank_cutoff_time), PARTNER_CUTOFF_OVERRIDE, HOLIDAY, PARTNER_CONFIG (is_own_desk), PARTNER_PAIR (needs_bank_lock), PARTNER_ENTITY, COLLECTION_RECEIVING_ENDPOINT (risk_band, single_use), SETTLEMENT_SENDING_ENTITY, SETTLEMENT_RAIL, DESTINATION_APPROVAL

Module	Field group in this module	Group	Operations	Finance	Management	Tables and fields covered
	Fee structures, tiers and overrides (the percentages applied to the sender and receiver; what the quote prints)	Configuration and master data	view	view · propose	view · approve	FEE_STRUCTURE (pct, sender_pays_pct, receiver_pays_pct, min_markup_pct, max_markup_pct, rate_basis, mode, customer_facing_*), FEE_TIER, FEE_OVERRIDE
	Minimum margin, partner fee, variance thresholds, expected bank fees	Margin, pool, cost breakdown	—	view	view	FEE_STRUCTURE.min_margin_pct, PARTNER_PAIR.partner_fee_pct, FEE_STRUCTURE.variance_threshold_rel, SETTLEMENT_RAIL.expected_bank_fee
	Markup-share and rebate terms	Margin, pool, cost breakdown	—	view	view	MARKUP_SHARE_PARTY (name only is configuration), MARKUP_SHARE_RULE (basis, pct, settlement_mode), PARTNER_REBATE_RULE (basis, pct, payout_currency)
Rates	Partner rate of the day, as quoted (rate, direction, city), its version and whether it is usable	Partner rates as entered	view · enter	view · confirm	view	PARTNER_RATE_VERSION.quoted_rate, quoted_direction, rate, location, version_no, expires_at, status (active / usable / flagged / breached / approved / rejected; Operations sees usable, flagged or frozen)
	Market snapshots, day comparison, spread, averages, breach	Reference rate and comparison	usable / flagged / frozen only	view · approve breach	view	MARKET_RATE, RATE_COMPARISON, PARTNER_RATE_VERSION.spread_pct and the breach decision

Module	Field group in this module	Group	Operations	Finance	Management	Tables and fields covered
Quoting	Deal group and legs: parties, states, references, clocks, extensions, packages	Operational	view · enter	view	view	DEAL_GROUP, DEAL (identities, leg_type, funding_source, states, sent_at, effective_valid_until, grace_until, rate_locked_at, cutoff_at, conversion_due_date), QUOTE_PACKAGE, QUOTE_VALIDITY_EXTENSION, the invoice a group collects
	Sender-facing price: sender rate, fee applied, tier, customer-facing figures, amounts promised	Sender-facing prices	view (quotes)	view	view	DEAL_GROUP.sender_rate, customer_facing_fee_pct, customer_facing_rate, invoice_rate; DEAL.sender_rate, amount_in, gross_out, client_net, fee_sender_part, fee_receiver_part, fee_override_id, fee_tier_id; DEAL_FEE_TIER; PROJECT_MONTH_VOLUME; the printed figures of a QUOTE_PACKAGE
	Reference rate stamped on the leg	Reference rate and comparison	usable / flagged / frozen only	view · approve breach	view	DEAL.market_rate_id
Collection	Parts, endpoints, evidence, verification; cash tokens and counts	Operational	view · enter	view	view	COLLECTION (amount, endpoint, evidence_ref, state, token_ref, counted_at, sending_address), WALLET_REGISTRY
	Wallet screening: the provider's report as returned, the result, the decision and who made it	Operational	view · enter	view	view	WALLET_SCREENING — Operations screens and accepts a clear report; a report that is not clear is Management's second look (ROLE_RIGHT screening_second_look); Finance has no right on it; the decision is write-once; a partner's hold, freeze or decline is an event (REROUTE, LOSS_EVENT, EMERGENCY_ACTION) that no role at NPL lifts (rule 11)
	Overpayment credit	Operational	view · enter	view	view	SENDER_CREDIT

Module	Field group in this module	Group	Operations	Finance	Management	Tables and fields covered
Conversion	Instruction, partner rate used, what the partner delivered	Partner rates as entered	view · enter	view · confirm	view	CONVERSION.partner_rate_version_id, actual_out, calc_mode, state
	Expected conversion, variances by cause, residuals, margin retained, margin recognised	Margin, pool, cost breakdown	—	view	view	CONVERSION.expected_out, variance, basis_variance, residual_in, rounding_residual; EARN_GROSS, VAR_CONVERSION, VAR_CUTOFF, VAR_RATE_HONOUR postings
Settlement	Runs, lines, destinations, confirmations, shortfalls, returns; invoice lines discharged	Operational	view · enter	view	view	SETTLEMENT (incl. cutoff_at, execution_due_date), SETTLEMENT_LINE (deal_id, outcome, invoice_id, obligation_discharged, token_ref, evidence_ref), CONFIRMATION, SHORTFALL, SETTLEMENT_RETURN, INVOICE_BALANCE
	Amount available to pay out at a partner	Ledger and balances	available-to-pay figure only	view · reconcile	view	PROJECT_BALANCE due figure (one number per partner × currency, no postings)
	Bank fee expected vs actual, covered fees, fee decisions	Margin, pool, cost breakdown	—	view	view	BANK_FEE_EVENT.expected_amount, actual_amount; FEE_DECISION.pct
Losses, reroutes and balance conversions	Request, phase, outcome, custody wallet, alternate partner; the loss event as a fact (side, amount, reason)	Operational	view · enter	view	view	REROUTE (trigger, phase, outcome, own_wallet_id, alternate partner), BALANCE_CONVERSION (request fields), LOSS_EVENT (side, amount, reason, state)
	Loss split and recoveries, how the make-good was funded; dues recovered, forwarding policy; expected out and variance of a balance conversion	Margin, pool, cost breakdown	—	view	view	LOSS_EVENT shares, pool_funded, wallet_funded; LOSS_RECOVERY; REROUTE.forwarding_policy, recovered_amount, partner_agreement_ref; BALANCE_CONVERSION.expected_out / variance; ENTITLEMENT_REATTRIBUTION
Earnings, shares and rebates	Earnings resting at partners, offsets between partners, accruals, reconciliation, payment	Margin, pool, cost breakdown	—	view	view	EARNINGS_RECEIVABLE, EARNINGS_OFFSET, MARKUP_SHARE_ACCRUAL, PARTNER_REBATE_ACCRUAL, FX_RESULT postings

Module	Field group in this module	Group	Operations	Finance	Management	Tables and fields covered
Reseller project (NPL-GR)	The two invoices as obligations: amounts, parties, what each line discharged	Operational	view · enter	view	view	INVOICE (kind, amount, currency, vendor_invoice_id), INVOICE_BALANCE, DEAL_GROUP.invoice_amount
	Reseller and remittance margins, forex true-ups, NPL's profit	Margin, pool, cost breakdown	—	view	view	RESELLER_MARGIN, REMITTANCE_MARGIN, NPL_PROFIT, VAR_FX_TIMING and RESELL_* postings
Ledger and reconciliation	Accounts, transactions, postings, balances, identities, the client roll-up; opening entries and partner statement reconciliations	Ledger and balances	available-to-pay figure only	view · reconcile	view	LEDGER_ACCOUNT, LEDGER_TRANSACTION, LEDGER_POSTING, OPENING_ENTRY, PARTNER_STATEMENT_RECONCILIATION, PROJECT_BALANCE, GROUP_ENTITLEMENT, OFFSET, CUSTODY, CLIENT_POSITION
	Figures in the reporting currency	Margin, pool, cost breakdown	—	view	view	REPORTING_VALUE (any per-currency figure converted at the latest platform-pair rate)
Reports, exports and messages	Customer approval (Email OTP): the code reference, the status and its stamps, the attempts, the stored email snapshot and the chat screenshot; never the code itself	Operational	view · enter	view	view	CUSTOMER_APPROVAL (all but code_hash), CUSTOMER_APPROVAL_EVENT — Operations sends, enters the code and records a rejection; Finance and Management view; code_hash is in no group and on no screen, export or API
	Operational reports and sender-facing documents	Operational	view · enter	view	view	deal lists, collection and settlement reports, quote packages rendered from MESSAGE_TEMPLATE (sender-facing fields only), partner instructions, the client journal
	Economic reports: margin, pool, cost breakdown, variances, earnings, offsets, losses, reseller margins, Finance Log	Margin, pool, cost breakdown	—	view	view	every report, export, message or notification that carries a value from groups REF, ECON or LEDGER
Administration	Approvals: request, approve, reject, escalate	Approvals, audit, users, roles	own requests	view all · approve own scope	view all · approve · users and roles	APPROVAL
	Audit log, record locks and emergency actions	Approvals, audit, users, roles	own requests	view all · approve own scope	view all · approve · users and roles	AUDIT_LOG, RECORD_LOCK, EMERGENCY_ACTION
	Users, roles and rights per controlled action	Approvals, audit, users, roles	own requests	view all · approve own scope	view all · approve · users and roles	USER (role_id), ROLE (sees_economics), ROLE_RIGHT (may_initiate, may_approve, escalates_to_role_id)

4 · Approval rights per controlled action — the ROLE_RIGHT rows

The approving role is always a different user from the initiator. "Escalates to Management when" lists the conditions that add a Management approval on top of, not instead of, the approving role's. The last column is the `ROLE_RIGHT.action` code; a row with a code is configuration (may_initiate, may_approve, escalates_to_role_id per role), a row marked — is an audited operational step. Identical to §5 of the Lifecycle & Approvals document, from the same source.

Controlled action	Initiates	Approves	Escalates to Management when	On rejection	ROLE_RIGHT
Quote a deal (price, fee, partner × pair)	Operations	Finance	Below-margin quote: Finance approval mandatory before sending (FEE_STRUCTURE.min_margin_pct)	Returns to Ops with reason; the quote package is not sent; Ops re-prices as a new quote	`price_quote`
Extend a quote's validity (before the validity in force ends)	Operations	Finance	The new validity passes the partner's cutoff or the rate version's expiry; any number of extensions, each a QUOTE_VALIDITY_EXTENSION row re-issuing the package at the same price	Validity ends as quoted; the paths are the grace decision and a new deal group	`extend_quote_validity`
Honour an expired quote's rate on a new deal (late decision)	Operations	Finance	Always Finance (honour_expired_rate): the new leg is priced on the earlier leg's market rate and partner rate version, the difference against the day's rate posting to VAR_RATE_HONOUR	Re-quote at today's rate with a new deal reference; the original stamp is kept	`honour_expired_rate`
Enter a manual rate (reference feed outage)	Operations	Finance	Evidence attached (both feeds down)	No rate; quoting waits for the feed or a new manual entry	—
Confirm a partner rate version	Operations (enters, as quoted: rate and direction; city for cash pairs)	Finance (confirms)	Breached version: Finance approval with recorded reason, or rejection; no skip path	Pair stays frozen; Ops may request a better rate from the partner, which is a new version	—
Record a partner cutoff override (extension agreed, or early close)	Finance	— (recorded with the partner's agreement reference)	—	The standing cutoff applies	—

Controlled action	Initiates	Approves	Escalates to Management when	On rejection	ROLE_RIGHT
Send a quote for the customer's approval (Email OTP)	Operations (only on a project with Email OTP on, after any Finance approval the quote needed)	— (no approval: the send is the issue of the quote)	One email per quote issue to the sender's registered approver address: the rendered quote, a one-time code and the partial destination; no link, never the full account or wallet; a resend or any change to the order is a new issue and voids the old code; refused while the sender has no approved approver address and chat group, or a change to them is pending	—	`send_email_otp`
Enter the customer's approval code (Email OTP)	Operations (from the customer's paste in the registered chat group)	— (the server validates: right code, right issue, unexpired, unused; the amount too above the step-up threshold)	Five wrong attempts lock the code; a locked or expired code needs a new send; the chat screenshot is attached as evidence; the approval stamps the group Accepted with the entering user and the time; a code whose evidence is not from the registered group blocks collection and opens an exception	A wrong code is refused with the attempt counted	`enter_email_otp_code`
Record a customer rejection (Email OTP)	Operations (a reply from the registered approver address, or a message in the registered chat group)	— (reason mandatory, recorded verbatim)	The group leaves Sent: re-quoted as a new group or voided; the code is void; a rejection never needs an approval	—	`record_customer_rejection`
Change the Email OTP settings (the project's switch; a sender's approver address, registered chat group and whether Email OTP is required for it)	Operations	Finance (never the entering user)	Marking a sender not required (its customer will not name an approver address) removes a control: Management approves as well, with a recorded reason, and the exemption is on the quarterly review. Protected master data (Roles rule 13): a new approver address activates only after a verification code sent to it comes back through the registered chat group; a chat-group change carries a screenshot from the group; while a change is pending no approval email can be sent for that sender; a change of address voids that sender's open codes	The pending change is dropped with the reason; the old values stay in force	`set_email_otp_settings`

Controlled action	Initiates	Approves	Escalates to Management when	On rejection	ROLE_RIGHT
Approve bank account details (a new or changed row)	Operations (enters the details in full from the bank's letter or confirmation, with the document as evidence)	Finance or Management (never the person who entered them)	Always a second person (Roles rule 10): the row becomes active and the account, endpoint, rail or destination approval that points at it may become active; every full read of the details is logged	The row stays draft; what points at it cannot activate	`bank_details_approve`
Screen a sending or receiving wallet	Operations (an Operations action, not an approval)	— (result and decision recorded with evidence); Management decides a second look (screening_second_look)	A report not clear under the provider's Strict rulebook (any category at threshold, a terrorism / TF trace, or a score outside the clear band) goes to Management's second look: Management decides accept, accept_alternate or reject with a reason; Finance has no right on a screening; a partner's hold, freeze or decline is recorded as its event and never lifted at NPL; accept_alternate may land only on an elevated-band endpoint	No collection on that address; the sender is given an alternate wallet or refused	`screening_second_look`
Verify a collection (hash / slip / receipt; a cash part after the partner's count)	Operations	— (audited; Finance reviews in reconciliation)	Underpayment left open beyond policy: Finance decides wait or void. The system refuses the part if its endpoint is not active, does not belong to the leg's partner entity, or its kind does not match the leg's collection method; a single-use endpoint serves one deal only	Collection stays unverified; funds are not attributed	—
Activate a collection endpoint (COLLECTION_RECEIVING_ENDPOINT)	Operations	Finance	— (the system refuses to activate a bank endpoint without rail, or a wallet whose rail differs from its network; a wallet's network must be one the partner's vehicle offers)	Endpoint stays inactive; no collection may reference it	—
Instruct a conversion	Operations	Finance	Variance beyond tolerance opens an exception that Finance resolves; on a bank-channel pair Converting may not start before conversion_due_date; a next-day rate that breaches the minimum margin defers the conversion with a reason	Conversion not instructed; deal stays Collected	—

Controlled action	Initiates	Approves	Escalates to Management when	On rejection	ROLE_RIGHT
Keep the deal's margin unconverted (CONVERSION.residual_in)	Finance	— (part of the conversion instruction; EARN_GROSS recognised in the collection currency)	—	The margin converts with the client's money and rests at the partner as EARNINGS_RECEIVABLE	—
Resolve a conversion variance exception	Finance	Finance (second user)	Variance above the project's exception limit → Management	Exception stays open; the deal is already converted and does not wait	—
Prepare and release a settlement	Operations	Finance	Above settlement limit; third same-day slot; a counterparty receiver paid from a leg attributed to another group (offset) — never for a line paying a sender_return or partner_transit receiver, which debits the group of the leg named in its deal_id; a bank-rail settlement approved after the partner's cutoff goes out on the next business day; only one Finance user on shift → Management countersigns	Back to Prepared with reason; lines can be changed and re-submitted	—
Override the bank-fee treatment on one settlement	Operations	Finance	—	Project default applies	—
Cover a bank fee, or raise the fee above the cap	Finance (recommends, FEE_DECISION.recommended_by)	Management	Always: a covered bank fee, or a markup above max_markup_pct after discussing with the customer	The project's bank-fee treatment applies; the cap stands	`cover_bank_fee / raise_fee_cap`
Top up a shortfall from the pool	Finance	Management	Always Management (company money becomes client money)	Shortfall stays open; receiver remains short	—
Pay a counterparty receiver from another group's leg (offset)	Operations	Finance	Always Management, with tighter aging on the resulting offset. Does not apply to refund (sender_return) or hop (partner_transit) lines: cross_group_payout never fires on them	Lines must stay within the entitled group	`cross_group_payout`
Request a reroute	Operations	Finance	Contingency route set (applicable_for_reroute) is configuration: Management	Deal stays on its route; if the partner is unavailable the deal waits or is voided	—
Outbound transfer from NPL's own wallet	Finance	Management (dual approval)	Always; executed by NPL signers outside the platform (hardware or multisig); a bridge hop to the leg's partner within custody_max_hours follows the same path	Funds stay in custody; aging continues to be reported	—

Controlled action	Initiates	Approves	Escalates to Management when	On rejection	ROLE_RIGHT
Recover dues on a reroute (net against forwarded funds)	Finance	Management	Always; amount ≤ outstanding receivable at that partner; partner's agreement recorded	Forward the full amount	`recover_dues`
Earnings offset between partners (EARNINGS_OFFSET)	Finance	Management	Always: NPL's converted margin at one partner becomes the client's there and the same value of the client's unconverted money at another becomes NPL's, at the to-partner's rate of the day; recovers EARNINGS_RECEIVABLE rows; recorded for NPL in FX_RESULT	Margins stay where they rest; receivables wait for the partner's fee cycle	`earnings_offset`
Balance conversion (client balance to another currency)	Finance	Management	Always; any excess over the served group's entitlement is an offset and needs the offset approval too	Balance stays in its currency	`balance_conversion`
Open a return leg after a rejected payout	Operations	Finance	Destination other than the sender's own return receiver → Management with reason (refund_to_third_party); markup apply / waive is a FEE_DECISION approved by Finance	Returned funds stay in balance for later payouts	`refund_to_third_party`
Override the network-fee policy on a refund	Operations	Finance	—	Project default applies	—
Void a deal before money moved	Operations	Finance	—	Deal continues	—
Void a deal after collection (refund / sender credit / hold)	Operations	Management	Always	Deal continues; funds stay attributed	—
Record a loss event and approve its split	Operations records; Finance proposes the split	Management (approve_loss_split)	Always: the whole loss is booked to NPL and the client made whole when the event is approved; each share the partner, the sender or the client bears is its own LOSS_RECOVERY posting; unwinding the deal (COLLECTION reversed) is a separate Management decision	The loss stays open on the exception list; the make-good stands	`approve_loss_split`
Record a loss recovery received (partner credit, sender payment)	Finance	— (audited; names the LOSS_RECOVERY row)	—	The receivable stays open	—
Record a partner's destination approval (DESTINATION_APPROVAL)	Operations	Finance	— (payout details follow the account's kind: bank reference for a bank account, network and address for a wallet; a wallet account carries its screening)	Approval stays pending_partner; quote-first deals for it cannot leave Inquiry	—

Controlled action	Initiates	Approves	Escalates to Management when	On rejection	ROLE_RIGHT
Post NPL-GR's vendor and resale invoices	Finance	— (audited; posted once each in the invoice currency, source Invoice)	—	Nothing posts; the remittance deal cannot name an invoice that is not recorded	–
Enable an own-desk partner configuration	Finance	Management	Always: NPL itself converts in its own wallet for this project	The project keeps its outside partners	`enable_own_desk`
Change thresholds, fee structures and tiers, partner configuration, rate sources, pairs and rounding, holidays, templates	Finance	Management	Always; all versioned (new rows with an effective date)	Current version stays in force	–
Change a system setting (reporting currency, staleness limit, time zone) or a platform pair	Finance	Management	Always	Current setting stays in force	–
Create, change or remove a user or role (ROLE, ROLE_RIGHT, USER)	Management	Management (second user)	Always	No change	–
Ledger adjustment (reversal and re-posting; a company currency exchange through FX_RESULT)	Finance	Management	Always; the reversal names the transaction it reverses	Books unchanged; the discrepancy stays on the exception list	–
Emergency suspend of a partner, freeze of a destination, or override of a partner cutoff (immediate)	Finance applies it at once, with a mandatory reason; the suspension, freeze or override takes effect immediately on every deal and settlement it touches	Management ratifies within one business day (after the fact)	Always: the action is recorded as applied and awaiting ratification; the deals affected show it as the blocker (Roles & Visibility rule 8)	Not ratified: the action is lifted and the standing configuration applies again; the record and the reason stay (EMERGENCY_ACTION in the ERD)	`emergency_suspend`

5 · Enforcement rules (build reference)

1. **Role on the user, rights on the role.** `USER.role_id` names one `ROLE` (operations, finance, management today); `ROLE.sees_economics` is false for Operations; `ROLE_RIGHT` holds one row per role × controlled action with may_initiate, may_approve and the role added on escalation. Rights follow Sections 3 and 4 with no per-user exceptions; a new role is a Management-approved configuration change.
2. **Server-side field filtering on every read.** Each table's fields carry the group of Appendix A. Any read by a role whose sees_economics is false strips the fields of groups *Reference rate and comparison*, *Margin, pool, cost breakdown* and *Ledger and balances* before the response is built; the same filter applies to list views, search, exports, generated documents, notifications, messages, the client journal and scheduled reports. The user interface receives only what the role may see, so nothing can be revealed by inspecting a page or a cached response.
3. **Derived figures follow their inputs.** A figure computed from a hidden field is hidden; a total, average, chart or reporting-currency value that would reveal a hidden field is hidden. The one exception is deliberate: Operations sees the *amount available to pay out* per partner × currency as a single number, because preparing a settlement needs it. Customer-facing figures are not derived economics: they are what the quote prints.
4. **Writes are role-scoped.** Operations may create and edit operational records only (group *Operational*, *Sender-facing prices* through quoting, *Partner rates as entered*); Finance may additionally resolve exceptions, record reconciliation, recoveries and true-ups; configuration, system settings, users and roles are written only through an approved proposal.
5. **Maker-checker at the approval endpoint.** `APPROVAL.approved_by` must differ from `APPROVAL.requested_by`; the approver's role must hold may_approve for the action in ROLE_RIGHT; the escalation conditions of Section 4 add a Management approval rather than replacing Finance's; when only one Finance user is on shift a Management countersignature stands in for the second Finance user and is recorded as a countersignature.
6. **Nothing is deleted.** Rejections keep the request, the decision and the mandatory reason; a re-submission is a new approval that points at the rejected one; `AUDIT_LOG` records actor, time, reason and record version for every controlled action and every configuration change.
7. **Users and roles need two Management users.** Creating, changing or removing a user, a role or a ROLE_RIGHT row is a Management action approved by a second Management user.
8. **Exceptions are shown as blockers, not as figures.** A frozen partner × pair, an open variance exception, an open offset, custody aging, a negative pool, an unfunded make-good and an open loss recovery appear to Operations as the state that blocks their work and the role that must act; the spread, variance, offset amount, pool and loss shares are Finance's view.
9. **Messages print only what the template allows.** `MESSAGE_TEMPLATE.printed_fields` is the list of model fields a template may render; a quote template is sender-facing only, so a message can never carry a partner rate, a margin or a cost whichever role sends it.
10. **Bank account details are read in full and read-logged.** BANK_ACCOUNT_DETAILS belongs to group *Configuration and master data*: Operations enters a row from the rail's template, Finance or Management approves it (controlled action bank_details_approve), and all three roles read every field unmasked, on one card component, because the people who instruct and verify transfers need the details as the bank sees them. In return every full read — card, export or API — writes an AUDIT_LOG row with the actor and time, and the quarterly access review (5a) samples those rows. The evidence files (bank letters, KYC, legal documents) stay under the restricted prefix of the file store, which only Finance and Management resolve.
11. **Screening outcomes have three owners, and there is no override right.** (1) A partner's sanctions or AML hold, freeze or decline is the partner's decision: no role at NPL has a right that lifts it; NPL records it as the event it is (REROUTE with trigger compliance_hold, LOSS_EVENT with reason account_frozen, EMERGENCY_ACTION of kind destination_freeze), routes around it, and records the partner's clearance

reference when the partner lifts it. (2) NPL's own wallet screening is operational when the provider's report is clear under its Strict rulebook (Operations records accept) and a Management decision otherwise: the screening row requests the second look, Management decides accept, accept_alternate or reject with a reason (ROLE_RIGHT screening_second_look: may_initiate Operations, may_approve Management; no Finance row), and the approver is never the person who screened. There is no Finance override right. (3) A technical false positive is a new screening row with its evidence, decided on its own report. Enforcement: WALLET_SCREENING.decision is write-once for every role and every channel (screen, API, export re-import, a re-submitted or replayed approval request, which carries the same idempotency key and returns the first result without writing); the provider's report is operational data the three roles read, while a partner's clearance letter is an evidence file under the restricted prefix.

12. **The field groups apply outside the application too.** The fallback workbook of the Architecture (the export every five minutes) is two workbooks, not two tabs: an operational workbook (open deals and their states, cutoffs, pending approvals, the partner rates of the day as entered, the amount available to pay out per partner and currency) shared with the Operations, Finance and Management accounts, and a Finance workbook (partner balances, pool, margins, spreads, the reconciliation figures) shared with Finance and Management only; tab-level protection is not relied on. Both are shared to named accounts, never by link; the export job writes through a service account; a leaver's account is removed from both on the day (procedure A.10) and the share lists are compared with the user list at the quarterly access review. Generated extracts and scheduled reports pass the same server-side filter as a screen (rule 2). Notifications, monitoring alarms, chat messages and incidents raised on the delivery board name the item and the state in operational terms (rule 8) and carry no figure of the groups Reference rate and comparison, Margin, pool, cost breakdown or Ledger and balances; the alarms of the Architecture's monitoring carry no deal figures at all.
13. **Email OTP settings are protected master data, and a code is never readable.** The project's Email OTP switch and, on each sender, its one registered approver address and its registered chat group (platform, group name, group id; every sender has its own group) belong to group *Configuration and master data* and follow two paths: the three windows are THRESHOLD rows and follow the threshold rule, Finance proposes and Management approves; the switch and the sender's address and group change only through the controlled action set_email_otp_settings: Operations enters, Finance approves, never the same person, every change an APPROVAL and an AUDIT_LOG row with before and after. A new approver address is active only after a verification code sent to it comes back through the registered chat group and is entered; a chat-group change carries a screenshot from the group as evidence. While a change is pending the server refuses to send an approval email for that sender, and it never sends one to any address but the one stored on the sender; a required sender with no approved address cannot be quoted while the switch is on; the address is not on the quote screen. The requirement is per sender (SENDER.email_otp_required, true by default while the switch is on): marking a sender not required, for a customer who will not name an approver address, removes a control, so it is the one change on the card that Management approves as well, with a recorded reason; the sender is then quoted and approved in its chat group as today, every quote issue recording that the approval was taken in chat, and the exemption is listed with the approver addresses on the quarterly review. A change of address voids that sender's open codes, so a live code never moves. The one-time code exists only in the email and in memory at generation: the database holds its hash, which is in no field group and on no screen, export or API for any role; the approval row shows the code reference, the status, the stamps and the evidence. The senders' approver addresses and the senders marked not required are listed, per project, on the quarterly access review (5a) for Management to confirm. Inbound mail is the customer's only when it comes from the registered address, and never approves (Lifecycle & Approvals 2e; Configuration Schema rule 16).

What Operations necessarily sees. Operations enters the partner's rate and sees the sender rate and the amount the receiver is owed. For a fee_on_market partner those three numbers let a careful user work out NPL's gross margin on a deal by hand. The policy hides the *computed* figures, not the inputs Operations must handle; this follows today's practice (Operations types the agent rate). If Management wants the inference closed too, the partner's rate would have to be entered by Finance — a change to who does what, not to this matrix.

5a · Absence cover, scoped rights and delegation

Three questions from the design review, answered with NPL's decisions of 19 and 20 October. None of them adds a role or a per-user right; rule 1 of Section 5 stands.

14. Cover for staff absence is the role, not a delegation

Rights belong to the role, so any user holding a role may do what that role permits; nothing is handed from one person to another when someone is on leave, off shift or unreachable. If a whole role is unavailable, a user of a wider role may work a narrower role's steps through an account of that role (a Finance user takes an Operations-role account for the Operations steps and returns to the Finance account for the Finance steps). One safeguard makes this safe: the “approver is not the initiator” check of rule 5 is made on the person, not the account. Every USER row names the natural person behind it (`USER.person_ref`, ERD Appendix B.5), the two accounts of one person carry the same person_ref, and APPROVAL refuses an approver whose person_ref equals the initiator's. The Management countersignature when only one Finance user is on shift (rule 5) is unchanged.

Scoped rights: documented, not built

A per-user, per-project scope (a user limited to named projects, approved by Management) is a possible later addition for an unusually sensitive counterparty. It is recorded here as an option and is not built unless NPL chooses it; until then there are no per-user exceptions and visibility is by role only.

Time-limited delegation: not in P0

The reviewer's revised recommendation is adopted as written: “Define backup approval arrangements for staff absence, holidays and emergencies, ensuring maker-checker controls remain intact. Automated temporary delegation can be considered in a later phase.” Rule 14 is that arrangement. No delegation feature, no expiring rights and no delegation records exist in the P0 model.

Periodic access review

Management reviews users, roles, dormant accounts and leavers once a quarter and records the review; the procedure is A.10 of the Client Operating Procedures, and the users-and-access report that supports it is built in Phase 2 (M6).

Appendix A · Every field, its group, its rights

Generated from the data model: 90 tables and views, 844 fields. Rights per role as in Section 2; "view · enter" means Operations creates or edits the record in the normal course; actor fields (who approved, verified, posted, screened, recorded) belong to the approvals group.
