NPLify · Workflow Tree

P0 Technical Baseline · New XP Technologies · 19 October 2026 · compiled from the Lifecycle & Approvals, Operating Procedures, Scenario Catalogue, Ledger Posting Design, Configuration Schema, Roles & Visibility and Cutover documents

Level 0 · map | Level 1 · the tree | Level 2 · cross-references | Top-Down Map ↗

LEVEL 0 Every workflow, as one tree

The root splits into 8 classes of workflow, each class into sub-classes, and each sub-class into the single procedures (92 in all). A procedure names who initiates, who approves, when Management is added on top, what a rejection means, the ROLE_RIGHT code that carries the right, the codes it is written under in the Operating Procedures (C1–C10, A.1–A.9, B.1–B.13), the Scenario Catalogue (F1–F10, W1–W8) and the Ledger Posting Design (Patterns A–N), and the records it touches. The order of the classes is the order of a deal's day: set up, rates, quote, collect, convert, settle, exceptions, close.

CLASS 1 · 4 SUB-CLASSES · 14 PROCEDURES

Configure & set up

Everything that must exist before a deal can be priced: the client and its projects, parties, the partner configuration block, rates sources, templates, users. Finance proposes, Management approves; every row is versioned by effective date, never edited.

1.1 Start a new project | 1.2 Change configuration | 1.3 Parties, endpoints and destinations | 1.4 Users, roles and access

CLASS 2 · 3 SUB-CLASSES · 7 PROCEDURES

Rates of the day

Finance takes each partner's rate, the app normalises it and compares it with the market feed; a breach freezes the partner × pair until Finance decides. On bank-side pairs the partner's 14:30 cutoff binds the lock.

2.1 Partner rate versions | 2.2 Market reference | 2.3 Bank cutoff day (C9)

CLASS 3 · 4 SUB-CLASSES · 15 PROCEDURES

Quote

Operations picks sender, receiver group, partner × pair and amount mode; the app applies the fee structure in force and prices on the market rate or the partner's rate as the structure says. Pricing fields are stamped once and never recomputed.

3.1 Price and send a quote | 3.2 Validity, grace and late decisions | 3.3 Entry modes without a quote | 3.4 Fee mechanics decided at quote

CLASS 4 · 2 SUB-CLASSES · 9 PROCEDURES

Collect

By the common procedure the method calls for. Every part is verified by Operations with its evidence; the collection must land on an endpoint of the partner entity stamped on the deal, of the kind the leg's method requires.

4.1 Collection methods | 4.2 Verify the collection

CLASS 5 · 2 SUB-CLASSES · 7 PROCEDURES

CLASS 6 · 3 SUB-CLASSES · 16 PROCEDURES

Convert

Operations instructs the conversion once the deal is Collected (on a bank-side pair, not before the due date); Finance approves. The receiver's fee part is taken at conversion; NPL's margin is captured here and never again at risk.

5.1 Conversion on a deal leg

5.2 Conversions not on a deal

Settle (pay out)

Operations prepares the settlement: lines to approved destinations, within the group's entitlement, rounded as the pair says. Finance approves; Management also above the limit, for a third same-day slot, for an offset, or as countersignature when only one Finance user is on shift. Release discharges the promise; confirmation closes the line.

6.1 Prepare, approve and release

6.2 Payout methods

6.3 Bank fees and returns

CLASS 7 · 5 SUB-CLASSES · 12 PROCEDURES

Exceptions, custody & company money

Frozen states need a decision, not time: reroutes, custody in NPL's own wallet, voids, loss events, earnings offsets and dues recovery, ledger adjustments. Money that already moved is never rolled back by a rejection.

7.1 Reroute and custody

7.2 Voids and unwinds

7.3 Loss events and recoveries

7.4 Earnings resting at partners

7.5 Ledger corrections

CLASS 8 · 4 SUB-CLASSES · 12 PROCEDURES

Reconcile, close & report

Finance reconciles every evening and at month end; the ledger's identities are the controls. Earlier history enters through the cutover's parallel run and backfill.

8.1 Daily

8.2 Month end

8.3 Reports the ledger answers

8.4 Cutover: parallel run, backfill and switch

● Operations initiates ● Finance approves / initiates ● Management added ● System / job code

ROLE_RIGHT action code

LEVEL 1 The tree, to its full depth

Open a class, then a sub-class, then a procedure. Search matches any field; the filters narrow to procedures where Management is added, to the thirteen configurable rights, or to the procedures one project SOP cites. Every procedure has a stable anchor (its number) so other documents can link to it.

1 Configure & set up

4 sub-classes · 14 procedures

Everything that must exist before a deal can be priced: the client and its projects, parties, the partner configuration block, rates sources, templates, users. Finance proposes, Management approves; every row is versioned by effective date, never edited.

1.1 Start a new project (4)

Part C of the Operating Procedures: classify, configure, write the SOP, run the first deal with Finance.

- **1.1.1 Classify the project against an archetype** — Finance → audited
- **1.1.2 Configure the project from the schema** — Management always — Finance → Management
- **1.1.3 Write the project's SOP** — Management always — Finance → Management
- **1.1.4 Run the first deal with Finance on the screen** — Operations → Finance

1.2 Change configuration (4)

Thresholds, fee structures and tiers, partner configuration, rate sources, pairs and rounding, holidays, templates: new rows with an effective date, never edits.

- **1.2.1 Change thresholds, fees, tiers, partner config, pairs, holidays, templates** — Management always — Finance → Management
- **1.2.2 Change a system setting or a platform pair** — Management always — Finance → Management
- **1.2.3 Enable an own-desk partner configuration** — Management always — enable_own_desk — Finance → Management
- **1.2.4 Record a partner cutoff override (extension or early close)** — Finance → audited

1.3 Parties, endpoints and destinations (4)

The records a deal must find before it can leave Inquiry or receive money.

- 1.3.1 **Record a partner's destination approval** — Operations → Finance
- 1.3.2 **Activate a collection endpoint** — Operations → Finance
- 1.3.3 **Register a one-time local deposit account (single use)** — Operations → Finance
- 1.3.4 **Onboard a sender (allow-list, KYC, return account, overrides)** — Management when… — Operations → Finance

1.4 Users, roles and access (2)

Three roles, cumulative visibility; approver ≠ initiator on every approval.

- 1.4.1 **Create, change or remove a user or role** — Management always — Management → Management
- 1.4.2 **Set approval rights per controlled action** — Management always — Management → Management

2 Rates of the day

3 sub-classes · 7 procedures

Finance takes each partner's rate, the app normalises it and compares it with the market feed; a breach freezes the partner × pair until Finance decides. On bank-side pairs the partner's 14:30 cutoff binds the lock.

2.1 Partner rate versions (3)

One RATE_COMPARISON per partner × pair × date, created lazily; versions are never overwritten.

- 2.1.1 **Enter and confirm a partner rate version** — Operations → Finance
- 2.1.2 **Approve or reject a breached version** — Finance → Finance
- 2.1.3 **Rate versions per city for cash pairs** — Finance → audited

2.2 Market reference (2)

Kraken, then CoinMarketCap (OANDA, XE), each with a staleness threshold; the prioritised chain per pair is PAIR_RATE_SOURCE.

- 2.2.1 **Capture the market snapshot** — System → audited
- 2.2.2 **Enter a manual rate on a reference feed outage** — Operations → Finance

2.3 Bank cutoff day (C9) (2)

Pairs that rely on the banking channel at Ali and the other Asian partners; Jeton and Aquanow have no cutoff.

- 2.3.1 **Lock the rate before the cutoff; same-day conversion** — Operations → audited
- 2.3.2 **After the cutoff: collection goes ahead, conversion due next business day** — System → Finance

3 Quote

4 sub-classes · 15 procedures

Operations picks sender, receiver group, partner × pair and amount mode; the app applies the fee structure in force and prices on the market rate or the partner's rate as the structure says. Pricing fields are stamped once and never recomputed.

3.1 Price and send a quote (4)

Inquiry → Quoted → Sent → Accepted.

- 3.1.1 **Quote a deal (price, fee, partner × pair)** price_quote — Operations → Finance
- 3.1.2 **Issue the quote package within freshness** — Operations → audited
- 3.1.3 **Sender accepts within validity** — Operations → audited
- 3.1.4 **Amount modes and customer-facing figures** — Operations → audited

3.2 Validity, grace and late decisions (5)

Validity may be extended any number of times before it ends; after it, grace applies; beyond it the sender gets a new deal.

- 3.2.1 **Extend a quote's validity** Management when... extend_quote_validity — Operations → Finance
- 3.2.2 **Validity lapses: expired / in grace** — System → audited
- 3.2.3 **Late decision: honour the old quote within grace** — Finance → Finance
- 3.2.4 **Late decision: re-quote as a new deal group** — Operations → Finance
- 3.2.5 **Honour an expired quote's rate on the new deal** honour_expired_rate — Operations → Finance

3.3 Entry modes without a quote (2)

Collect-first and estimate-first legs.

- 3.3.1 **Collect-first deal (born at Collected, priced at conversion)** — Operations → audited
- 3.3.2 **Estimate-first deal (indicative figure, priced at conversion)** — Operations → audited

▾ 3.4 **Fee mechanics decided at quote** (4)

Fee parts, tiers, shares, rebates and caps are stamped on the leg.

▸ 3.4.1 **Fee tier by monthly volume (crossing deal split)** System → audited

▸ 3.4.2 **Raise the fee above the markup cap** Management always raise_fee_cap
Finance → Management

▸ 3.4.3 **Sender fee override and selected-sender rates** Management always
Finance → Management

▸ 3.4.4 **Markup shares and partner rebates accrue with the conversion** System → audited

4 Collect

2 sub-classes · 9 procedures

By the common procedure the method calls for. Every part is verified by Operations with its evidence; the collection must land on an endpoint of the partner entity stamped on the deal, of the kind the leg's method requires.

4.1 Collection methods (5)

The common procedures C1, C2, C4, C7 and the bridge wallet.

- 4.1.1 **C2 · USDT collection with wallet screening** override_screening_reject — Operations → audited
- 4.1.2 **C4 · Bank transfer in (SWIFT; SEPA when offered)** — Operations → Finance
- 4.1.3 **C1 · Cash by token (collection side)** — Operations → audited
- 4.1.4 **C7 · One-time local deposit account** — Operations → audited
- 4.1.5 **Bridge collection on NPL's own wallet (network the partner lacks)** — Management always — Operations → Finance + Management for the outbound hop

4.2 Verify the collection (4)

Operations verifies; Finance reviews in reconciliation.

- 4.2.1 **Verify a collection part (hash / slip / receipt; cash after the partner's count)** — Operations → audited
- 4.2.2 **Overpayment → sender credit** — System → audited
- 4.2.3 **Underpayment → wait or void (part collection)** — Finance → audited
- 4.2.4 **Instructions issued: Accepted → Collecting** — Operations → audited

5 Convert

2 sub-classes · 7 procedures

Operations instructs the conversion once the deal is Collected (on a bank-side pair, not before the due date); Finance approves. The receiver's fee part is taken at conversion; NPL's margin is captured here and never again at risk.

5.1 Conversion on a deal leg (6)

Collected → Converting → Converted.

- 5.1.1 **Instruct a conversion** — Operations → Finance
- 5.1.2 **Partner books; margin recognised** — System → Finance on exception
- 5.1.3 **Keep the deal's margin unconverted (residual_in)** — Finance → audited
- 5.1.4 **Resolve a conversion variance exception** Management when... — Finance → Finance
- 5.1.5 **Two-leg route: hop to the second partner (prior_leg)** — Operations → Finance
- 5.1.6 **Own-desk conversion (NPL converts in its own wallet)** — Operations → Finance

5.2 Conversions not on a deal (1)

Balance conversions of a held balance.

- 5.2.1 **Balance conversion (client balance to another currency)** Management always

  balance_conversion — Finance → Management

6 Settle (pay out)

3 sub-classes · 16 procedures

Operations prepares the settlement: lines to approved destinations, within the group's entitlement, rounded as the pair says. Finance approves; Management also above the limit, for a third same-day slot, for an offset, or as countersignature when only one Finance user is on shift. Release discharges the promise; confirmation closes the line.

6.1 Prepare, approve and release (4)

Prepared → Approved → Released → Completed.

- 6.1.1 **Prepare and release a settlement** Management when… — Operations → Finance
- 6.1.2 **Receiver confirms: full, or short → shortfall** — Operations → audited
- 6.1.3 **Top up a shortfall from the pool** Management always — Finance → Management
- 6.1.4 **Pay a counterparty receiver from another group's leg (offset)** Management always
  cross_group_payout — Operations → Finance

6.2 Payout methods (6)

The common procedures on the settlement side.

- 6.2.1 **C3 · Receiver wallet screened, then USDT payout** — Operations → Finance
- 6.2.2 **C5 · Bank transfer out (SWIFT; SEPA when offered)** Management when… — Operations → Finance
- 6.2.3 **C10 · Internal transfer inside the partner's platform** — Operations → Finance
- 6.2.4 **C8 · Local payout for a small amount** — Operations → Finance
- 6.2.5 **C1 · Cash by token (payout side)** — Operations → Finance
- 6.2.6 **NPL-GR vendor payment discharging a vendor invoice** — Operations → Finance

6.3 Bank fees and returns (6)

Post-confirmation true-ups and rejected transfers.

- 6.3.1 **Bank fee event: waived, carried forward or absorbed** — System → Finance
- 6.3.2 **Override the bank-fee treatment on one settlement** — Operations → Finance
- 6.3.3 **Cover a bank fee for the client** — Management always — cover_bank_fee — Finance → Management
- 6.3.4 **C6 · Returned transfer (bank rejects the payout)** — Management when... — refund_to_third_party — Operations → Finance
- 6.3.5 **Open a return leg to the sender (reconvert and refund)** — Management when... — refund_to_third_party — Operations → Finance
- 6.3.6 **Override the network-fee policy on a refund** — Operations → Finance

7 Exceptions, custody & company money

5 sub-classes · 12 procedures

Frozen states need a decision, not time: reroutes, custody in NPL's own wallet, voids, loss events, earnings offsets and dues recovery, ledger adjustments. Money that already moved is never rolled back by a rejection.

7.1 Reroute and custody (4)

The only way partner or partner entity change after quote; client money rests in NPL's own wallet in three cases only.

7.1.1 Request a reroute (partner unavailable, limit, holiday, compliance hold)

Management when... — Operations → Finance

7.1.2 Outbound transfer from NPL's own wallet — Management always

Finance → Management

7.1.3 Recover dues on a reroute (net against forwarded funds) — Management always

recover_dues — Finance → Management

7.1.4 Custody aging and the daily exception list

System → Finance / Operations

7.2 Voids and unwinds (3)

Before money moved, Finance; after collection, Management.

7.2.1 Void a deal before money moved

Operations → Finance

7.2.2 Void a deal after collection (refund / sender credit / hold) — Management always

Operations → Management

7.2.3 Unwind a deal after a loss (collection reversed) — Management always

Management → Management

7.3 Loss events and recoveries (2)

The whole loss is NPL's first and the client is made whole in the same transaction; each share is then its own posting.

- **7.3.1 Record a loss event and approve its split** — Management always — approve_loss_split
  Operations records; Finance proposes the split → Management
- **7.3.2 Record a loss recovery received (partner credit, sender payment)** — Finance → audited

7.4 Earnings resting at partners (2)

NPL's margin kept unconverted at one partner and moved to another.

- **7.4.1 Earnings offset between partners** — Management always — earnings_offset
  Finance → Management
- **7.4.2 Earnings receivable recovered on the partner's fee cycle** — Finance → audited

7.5 Ledger corrections (1)

Append-only: a correction is a reversing transaction plus a correct re-posting.

- **7.5.1**
  Ledger adjustment (reversal and re-posting; company currency exchange via FX_RESULT)
  Management always
  Finance → Management

8 Reconcile, close & report

4 sub-classes · 12 procedures

Finance reconciles every evening and at month end; the ledger's identities are the controls. Earlier history enters through the cutover's parallel run and backfill.

8.1 Daily (2)

A.6 End of day.

- 8.1.1 **End-of-day reconciliation** — Finance → audited
- 8.1.2 **Client status journal row (Google Sheet per client)** — System → audited

8.2 Month end (5)

A.7 Month end.

- 8.2.1 **Reconcile partner rebates against the partner's statement** — Finance → audited
- 8.2.2 **Reconcile and settle markup shares (Raeen)** — Finance → audited
- 8.2.3 **Review earnings resting at partners; propose offsets** Management always — Finance → Management
- 8.2.4 **Check tier volumes and exposure ceilings** Management always — Finance → Management
- 8.2.5 **Post NPL-GR's vendor and resale invoices; watch invoice balances** — Finance → audited

8.3 Reports the ledger answers (2)

Views over postings; never stored.

- 8.3.1 **Balances, entitlements, offsets, custody** — Finance / Management → audited
- 8.3.2 **Earnings, margins and profit** — Finance / Management → audited

▾ 8.4 **Cutover: parallel run, backfill and switch** (3)

One-off, before go-live (Cutover Approach).

▸ 8.4.1 **Parallel run on staging (three to four weeks)** Management always

Operations / Finance → Management

▸ 8.4.2 **Backfill earlier deals as real postings**

Operations / Finance → Finance

▸ 8.4.3 **Switch day, next day, rollback** Management always

Engineering / Finance → Management

LEVEL 2

Cross-references

The same procedures seen from the other documents' numbering, so a reader of any one document can find the procedure in the tree and the tree can be checked for completeness against each list.

Project SOPs × common procedures

Operating Procedures Part B cites Part A by code. ● = the SOP uses the procedure (collection, payout or cutoff side).

SOP	Entry mode	C1	C2	C3	C4	C5	C6	C7	C8	C9	C10	Scenarios

Common procedures C1–C10 ↔ flows F1–F10 ↔ tree

Common procedure (Operating Procedures Part A)	Flow (Scenario Catalogue Part 2)	Where it sits in the tree
C1 Cash by token — collection or payout	F1	2.1.3 Rate versions per city for cash pairs, 4.1.3 C1 · Cash by token (collection side), 6.2.5 C1 · Cash by token (payout side)
C2 USDT collection with wallet screening	F2	4.1.1 C2 · USDT collection with wallet screening, 4.1.5 Bridge collection on NPL's own wallet (network the partner lacks), 4.2.2 Overpayment → sender credit, 4.2.3 Underpayment → wait or void (part collection)
C3 Receiver wallet screened before a USDT payout	F3	6.2.1 C3 · Receiver wallet screened, then USDT payout
C4 Bank transfer in (SWIFT; SEPA when offered)	F4	1.3.2 Activate a collection endpoint, 1.3.4 Onboard a sender (allow-list, KYC, return account, overrides), 4.1.2 C4 · Bank transfer in (SWIFT; SEPA when offered)
C5 Bank transfer out (SWIFT; SEPA when offered)	F5	1.3.1 Record a partner's destination approval, 6.2.2 C5 · Bank transfer out (SWIFT; SEPA when offered), 6.3.3 Cover a bank fee for the client
C6 Returned transfer	F6	6.3.4 C6 · Returned transfer (bank rejects the payout), 6.3.5 Open a return leg to the sender (reconvert and refund)
C7 One-time local deposit account	F7	1.3.3 Register a one-time local deposit account (single use), 4.1.4 C7 · One-time local deposit account, 7.2.3 Unwind a deal after a loss (collection reversed), 7.3.1 Record a loss event and approve its split
C8 Local payout for a small amount	F8	6.2.4 C8 · Local payout for a small amount
C9 Bank cutoff (Ali and the other Asian partners)	F9	1.2.4 Record a partner cutoff override (extension or early close), 2.1.1 Enter and confirm a partner rate version, 2.3.1 Lock the rate before the cutoff; same-day conversion, 2.3.2 After the cutoff: collection goes ahead, conversion due next business day
C10 Internal transfer inside the partner's platform	F10	6.2.3 C10 · Internal transfer inside the partner's platform

Standing procedures of the day A.1–A.9 ↔ tree

Standing procedure	Where it sits in the tree
A.1 Rates of the day	2.1.1 Enter and confirm a partner rate version, 2.1.2 Approve or reject a breached version, 2.2.2 Enter a manual rate on a reference feed outage
A.2 Quoting	3.1.1 Quote a deal (price, fee, partner × pair), 3.1.2 Issue the quote package within freshness, 3.2.1 Extend a quote's validity, 3.3.1 Collect-first deal (born at Collected, priced at conversion)
A.3 Collecting	4.1.1 C2 · USDT collection with wallet screening, 4.1.2 C4 · Bank transfer in (SWIFT; SEPA when offered), 4.1.3 C1 · Cash by token (collection side), 4.2.1 Verify a collection part (hash / slip / receipt; cash after the partner's count)
A.4 Converting	5.1.1 Instruct a conversion, 5.1.3 Keep the deal's margin unconverted (residual_in), 5.1.4 Resolve a conversion variance exception
A.5 Paying out (settlement)	6.1.1 Prepare and release a settlement, 6.2.1 C3 · Receiver wallet screened, then USDT payout, 6.2.2 C5 · Bank transfer out (SWIFT; SEPA when offered)
A.6 End of day	1.1.4 Run the first deal with Finance on the screen, 7.1.4 Custody aging and the daily exception list, 8.1.1 End-of-day reconciliation
A.7 Month end	7.4.1 Earnings offset between partners, 8.2.1 Reconcile partner rebates against the partner's statement, 8.2.2 Reconcile and settle markup shares (Raeen), 8.2.3 Review earnings resting at partners; propose offsets, 8.2.4 Check tier volumes and exposure ceilings
A.8 Exceptions that have their own procedure	5.2.1 Balance conversion (client balance to another currency), 6.1.3 Top up a shortfall from the pool, 7.1.1 Request a reroute (partner unavailable, limit, holiday, compliance hold), 7.2.1 Void a deal before money moved, 7.2.2 Void a deal after collection (refund / sender credit / hold), 7.3.1 Record a loss event and approve its split
A.9 Who may do what — quick reference	1.2.1 Change thresholds, fees, tiers, partner config, pairs, holidays, templates, 1.2.2 Change a system setting or a platform pair, 6.3.2 Override the bank-fee treatment on one settlement, 6.3.6 Override the network-fee policy on a refund

ROLE_RIGHT action codes ↔ tree

The thirteen configurable approval rights (Lifecycle §5, Roles §4). Every other controlled action is an audited step or a fixed maker-checker pair.

Action code	Procedure
price_quote	3.1.1 Quote a deal (price, fee, partner × pair)

extend_quote_validity	3.2.1 Extend a quote's validity
honour_expired_rate	3.2.5 Honour an expired quote's rate on the new deal
override_screening_reject	4.1.1 C2 · USDT collection with wallet screening
cover_bank_fee	6.3.3 Cover a bank fee for the client
raise_fee_cap	3.4.2 Raise the fee above the markup cap
cross_group_payout	6.1.4 Pay a counterparty receiver from another group's leg (offset)
recover_dues	7.1.3 Recover dues on a reroute (net against forwarded funds)
earnings_offset	7.4.1 Earnings offset between partners
balance_conversion	5.2.1 Balance conversion (client balance to another currency)
refund_to_third_party	6.3.4 C6 · Returned transfer (bank rejects the payout), 6.3.5 Open a return leg to the sender (reconvert and refund)
approve_loss_split	7.3.1 Record a loss event and approve its split
enable_own_desk	1.2.3 Enable an own-desk partner configuration

Guided walkthroughs W1–W8 ↔ tree

Walkthrough (Scenario Catalogue Part 3)	Where it sits in the tree
W1 Quote-first deal, end to end (20 steps)	1.3.1 Record a partner's destination approval, 3.1.1 Quote a deal (price, fee, partner × pair), 3.1.2 Issue the quote package within freshness, 4.2.1 Verify a collection part (hash / slip / receipt; cash after the partner's count), 5.1.1 Instruct a conversion, 6.1.1 Prepare and release a settlement, 6.1.4 Pay a counterparty receiver from another group's leg (offset), 6.3.1 Bank fee event: waived, carried forward or absorbed
W2 Collect-first deal (6)	3.3.1 Collect-first deal (born at Collected, priced at conversion)
W3 Rejected payout and return leg (10)	6.3.4 C6 · Returned transfer (bank rejects the payout), 6.3.5 Open a return leg to the sender (reconvert and refund)
W4 Two-leg route via a deal group	5.1.5 Two-leg route: hop to the second partner (prior_leg)

(9)	
W5 Ad-hoc balance conversion (8)	5.2.1 Balance conversion (client balance to another currency)
W6 Reroute, custody and recover dues (6)	7.1.1 Request a reroute (partner unavailable, limit, holiday, compliance hold), 7.1.2 Outbound transfer from NPL's own wallet, 7.1.3 Recover dues on a reroute (net against forwarded funds)
W7 Rate day and breach approval (7)	2.1.1 Enter and confirm a partner rate version, 2.1.2 Approve or reject a breached version, 2.2.1 Capture the market snapshot
W8 Ledger and balances (7)	8.3.1 Balances, entitlements, offsets, custody

Ledger patterns A–N ↔ tree

Pattern (Ledger Posting Design §6–§19)	Where it sits in the tree
Pattern A Direct collection, conversion and accumulation	4.2.1 Verify a collection part (hash / slip / receipt; cash after the partner's count), 5.1.1 Instruct a conversion, 5.1.2 Partner books; margin recognised
Pattern B Part collection	4.2.3 Underpayment → wait or void (part collection)
Pattern C Settlement, confirmation, bank fees, shortfalls, rounding	6.1.1 Prepare and release a settlement, 6.1.2 Receiver confirms: full, or short → shortfall, 6.1.3 Top up a shortfall from the pool, 6.3.1 Bank fee event: waived, carried forward or absorbed
Pattern D Contingency routes and the bridge wallet	4.1.5 Bridge collection on NPL's own wallet (network the partner lacks), 5.1.5 Two-leg route: hop to the second partner (prior_leg), 7.1.1 Request a reroute (partner unavailable, limit, holiday, compliance hold), 7.1.2 Outbound transfer from NPL's own wallet, 7.1.3 Recover dues on a reroute (net against forwarded funds)
Pattern E Cancellations, reversals and voids	7.2.1 Void a deal before money moved, 7.2.2 Void a deal after collection (refund / sender credit / hold), 7.5.1 Ledger adjustment (reversal and re-posting; company currency exchange via FX_RESULT)
Pattern F Rejected payout and return leg	6.3.4 C6 · Returned transfer (bank rejects the payout), 6.3.5 Open a return leg to the sender (reconvert and refund)
Pattern G Inter-group offsets	6.1.4 Pay a counterparty receiver from another group's leg (offset)

Pattern H Balance conversion	5.2.1 Balance conversion (client balance to another currency)
Pattern I Overpayment and sender credit	4.2.2 Overpayment → sender credit
Pattern J Markup shares and partner rebates	3.4.4 Markup shares and partner rebates accrue with the conversion, 8.2.1 Reconcile partner rebates against the partner's statement, 8.2.2 Reconcile and settle markup shares (Raeen)
Pattern K Variances, by kind	2.3.2 After the cutoff: collection goes ahead, conversion due next business day, 3.2.5 Honour an expired quote's rate on the new deal, 5.1.4 Resolve a conversion variance exception
Pattern L Loss events: booked to NPL first, recovered share by share	7.2.3 Unwind a deal after a loss (collection reversed), 7.3.1 Record a loss event and approve its split, 7.3.2 Record a loss recovery received (partner credit, sender payment)
Pattern M The reseller project (NPL-GR): two invoices, one remittance deal	1.2.3 Enable an own-desk partner configuration, 5.1.6 Own-desk conversion (NPL converts in its own wallet), 6.2.6 NPL-GR vendor payment discharging a vendor invoice, 8.2.5 Post NPL-GR's vendor and resale invoices; watch invoice balances
Pattern N Earnings kept in the unconverted balance and offset between partners	5.1.3 Keep the deal's margin unconverted (residual_in), 7.4.1 Earnings offset between partners, 7.4.2 Earnings receivable recovered on the partner's fee cycle, 8.2.3 Review earnings resting at partners; propose offsets
